Dear Colleague

This letter authorises the extended use of the following guidance until 1st September 2018:

NHS Grampian Staff Guidance For The Inpatient Prescribing And Administration Of Nicotine Replacement Therapy (NRT) For Nicotine Withdrawal Symptoms in the Acute Setting

The review of this Guideline is currently underway and the updated version will be available later in 2018.

If you have any queries regarding this please do not hesitate to contact the Pharmacy and Medicines Directorate.

Yours sincerely

Sandy Thomson
Interim Chair of the Medicines Guidelines and Policies Group
NHS Grampian Staff Guidance For The Inpatient Prescribing And Administration Of Nicotine Replacement Therapy (NRT) For Nicotine Withdrawal Symptoms In The Acute Setting.

**Title:** NHS Grampian Staff Guidance For The Inpatient Prescribing And Administration Of Nicotine Replacement Therapy (NRT) For Nicotine Withdrawal Symptoms in the Acute Setting

**Unique Identifier:** NHSG/Guid/NRT_Acute_MGPG712

**Replaces:** N/A – New Document

**Lead Author/Co-ordinator:** Principal Pharmacist (clinical) NHS Grampian Acute

**Subject (as per document registration categories):** Prescribing and prescription

**Key word(s):** Nicotine replacement therapy, NRT, nicotine withdrawal symptoms, smoking cessation, inpatient

**Process Document: Policy, Protocol, Procedure or Guideline:** Guidance

**Document application:** NHS Grampian

**Purpose/description:** This guidance is intended to provide advice for medical staff on the prescribing of Nicotine Replacement Therapy (NRT) for patients being admitted to NHS Grampian Acute Service Inpatient Facilities.

**Group/Individual responsible for this document:** Grampian Medicines Management Group

**Policy statement:** It is the responsibility of all staff to ensure that they are working to the most up to date and relevant policies, protocols and procedures.
Responsibilities for ensuring registration of this document on the NHS Grampian Information/ Document Silo:

Lead Author/Co-ordinator: Principal Pharmacist (clinical) NHS Grampian Acute

Physical location of the original of this document: Pharmacy Department, Aberdeen Royal Infirmary

Job title of creator of this document: Principal Pharmacist (clinical) NHS Grampian Acute

Job/group title of those who have control over this document: Principal Pharmacist (clinical) NHS Grampian Acute

Responsibilities for disseminating document as per distribution list:

Lead Author/Co-ordinator: Principal Pharmacist (clinical) NHS Grampian Acute

Mental Health and Learning Disabilities Sector
Responsibilities for implementation:
Organisational: Acute Sector Operational Management Team and Acute Sector General Manager

Operational Management Units
Directorate Level: Directorate Service Managers and Clinical Directors

Sector
Directorate Level: General Managers, Medical Leads and Nursing Leads

Departmental: Clinical Leads

Area: Line Manager

Review frequency and date of next review: Review 2 yearly. Any significant changes in evidence will result in earlier alteration.

Responsibilities for review of this document:

Lead Author/Co-ordinator: Principal Pharmacist (clinical) NHS Grampian Acute

6. Appendix 1: Ensuring That Hospital Patients In Acute Settings Do Not Experience Nicotine Cravings | 7
7. Appendix 2 – Smoking Cessation Clinical Pathway | 8
1. Introduction

All NHS Grampian sites will be smoke free by March 2015; smoking is not permitted inside the buildings or in the grounds. This guidance is intended to provide advice for staff on the prescribing of Nicotine Replacement Therapy (NRT) for patients being admitted to the NHS Grampian Acute Service Inpatient Facilities. This policy may be applied to patients in inpatient settings including Aberdeen Royal infirmary, Aberdeen Maternity Hospital, Woodend Hospital, Dr Grays Hospital and the Links Unit in Aberdeen.

All smokers admitted to the NHS Grampian Acute Service Inpatient Facilities should be offered NRT to prevent cravings provided it is clinically appropriate and all should be referred to smoking cessation support while in hospital, which will continue on discharge from hospital if appropriate. NRT must be prescribed on the Prescription and Administration Record (PAR). NRT can be used in place of cigarettes after abrupt cessation of smoking or alternatively to reduce the quantity smoked in advance of making an attempt to stop. Although the primary aim of treatment is permanent cessation some NRT products are also licensed for a reduction in smoking with a view to stopping.

N.B. Electronic cigarettes are not recommended by NHS Grampian as part of an attempt to stop smoking as the current evidence on e-cigarettes remains weak and inconclusive and there is a lack of safety testing.

2. Informed Consent

The patient’s informed consent must be obtained before NRT can be prescribed and this should be recorded in the patient’s clinical notes. Informed consent for smoking cessation support will be obtained by Smoking Advice Service, routine referral is required in the Patient Admission Document.

3. Patient Assessment

- Explain to all patients who smoke that NHS Grampian buildings and grounds are smoke free as of March 2015 which means that they cannot smoke on any site.

- All smokers should be referred to the Smoking Cessation Specialist Service via PMS.

Whilst awaiting input from the Smoking cessation service a patient can be assessed using the following questions and by calculating a Fagerstrom Score:

1. Are you using/taking any nicotine replacement products at present?  
   - If yes then prescribe if appropriate.
2. Have you ever experienced withdrawal symptoms from smoking? (e.g. cravings, irritability, anxiety/depression, poor concentration).

3. Do you wish to stop smoking long term?

**Fagerstrom Score:**

Add the score for both factors. 5+ = High dependence, 3-4 = Moderate dependence, 1-2 = Low dependence. Refer to table 1 for appropriate prescribing level.

<td>3</td>
</tr>
</tbody>
</table>

**Total Score**

- **Patients suffering acute nicotine withdrawal and who are motivated to stop smoking** should be prescribed NRT for symptomatic relief.

  **Note:** On discharge from hospital, the patient will be given a minimum of a 7 days supply of NRT and advised on future support.

- **Patients suffering acute nicotine withdrawal but who do not intend to stop smoking** can be prescribed NRT to help with withdrawal symptoms (which may include; agitation, headaches, moodiness, irritability, nervousness, fidgeting, anger and cigarette craving).

  **Note:** NRT will NOT be given on discharge to patients who do not intend to stop smoking.

4. **Contra-Indications, Precautions And Further Information**

**Contra-indications**

Hypersensitivity to nicotine or any ingredient of the preparation.

**Cautions**

- Skin disorders – caution with nicotine patches
- Phenylketonuria – caution with lozenges
- Gastrointestinal Disease – caution with oral nicotine products
- Unstable cardiovascular or cerebrovascular disease causing hospitalisation
- Renal or hepatic impairment (moderate/severe)
- Phaeochromocytoma
- Uncontrolled hyperthyroidism
- Diabetes – monitor blood sugar closely
- Pregnancy and lactation – best to stop smoking without NRT, but if this is not possible NRT may be used, with short-acting products being preferable.
Smoking cessation can result in slower metabolism of certain drugs and a rise in blood levels. When prescribing NRT it is essential to consider the potential effects on all medication prescribed – refer to current British National Formulary (BNF). In addition for psychototropic drugs refer to the NHSG Staff Guidance on Smoking Cessation and Psychotropic Drug Interactions for further information.

Product Choice

Refer to Table 1. For more information on the complete range of products available, their advantages/disadvantages and the relevant reducing dose titrations see current BNF.

Discuss options with the patient. The choice of nicotine replacement preparations depends largely on patient preference and should take into account what preparations (if any), have been tried before and also on whether or not the patient is going to stop smoking completely during admission.

For patients who are stopping smoking:

- Nicotine patches are a prolonged release formulation and are applied for 16 hours (with the patch removed overnight) or for 24 hours. If the patient experiences strong cravings for cigarettes on waking a 24 hour patch may be more suitable.
- Immediate release nicotine preparations (gum, lozenges, inhalator, oral spray) are used whenever the urge to smoke occurs.
- Patients with a high level of nicotine dependence, or who have failed with NRT previously may benefit from using a combination of a long acting preparation and an immediate release short acting preparation to achieve abstinence.

For patients who are going to continue to smoke during admission:

- If the patient does not wish to stop smoking and is able to leave the ward to smoke then the safest option is to prescribe only short acting NRT, e.g. gum/lozenge/oral spray or inhalator. This should be prescribed at the appropriate strength on an as required basis for possible nicotine withdrawal effects due to a reduction in the amount of cigarettes smoked or if the patient craves a cigarette but is unable to smoke.

  Note: If a patch is being prescribed choose Niquitin® which is licensed to assist smokers who are unable to smoke. Nicorette® patches are not licensed for this indication.

Ongoing Monitoring

Monitor for changes in the use of NRT and smoking status, and re-assess the potential effect on other medicines which the patient is prescribed.
Table 1: Nicotine Replacement Therapy
Refer to current BNF for detailed information on the complete range of NRT products available.

<table>
<thead>
<tr>

<tr>
<th>Nicotine Dependence</th>
<th>Administration</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>NICOTINE PATCH (Nicorette® 16hr, Niquitin® 24hr)</td>
</tr>
<tr>
<td></td>
<td>Apply one daily each morning. Remove 16 hour patch before bed. Remove 24 hour patch next morning. Apply fresh patch to alternative site.</td>
</tr>
</tbody>
</table>

**Short-Acting NRT**

<table>
<thead>
<tr>
<th>Nicotine Dependence</th>
<th>Administration</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>NICOTINE GUM or LOZENGE</td>
</tr>
<tr>
<td></td>
<td>Gum: Chew the gum until the taste becomes strong then rest it between the cheek and gum. When the taste starts to fade repeat this process. One piece of gum lasts approx. 30 mins. Lozenge: Slowly allow each lozenge to dissolve in the mouth; periodically move the lozenge from one side of the mouth to the other. Lozenges last for approximately 10-30 minutes, depending on their size.</td>
</tr>
</tbody>
</table>

**Combination Therapy**

Patients with a high level of nicotine dependence, or who have failed with nicotine replacement therapy previously, may benefit from using a combination of a patch and an immediate release short acting preparation to achieve abstinence. Use a lower strength (2mg) lozenge or gum as required.

Distribution List

NHS Grampian Globals

Groups/persons consulted:

NHSG Acute Services Tobacco Group
NHSG Smoking Advice Service
NHSG Area Clinical Forum
NHSG Area Pharmaceutical Committee
Appendix 1: Ensuring That Hospital Patients In Acute Settings Do Not Experience Nicotine Cravings

Appendix 1: Supporting Patients with Nicotine Withdrawal

At Patient Admission:
Ask, "Do you smoke?" and document response in PAD Section 3: Breathing

Yes

Refer to the Smoking Advice Service via SCI Gateway/PMS TRAKcare/0500 600 332

No

Explain the Tobacco Policy and offer NRT to help quit or to prevent cravings.

Make aware that support is always available if they change their mind

Yes

Use the Tobacco Clinical Pathway to assess nicotine dependence and select appropriate product choice

Monitor nicotine use, side effects and smoking intentions

Long term patients may require reassessment of nicotine requirements

At discharge give information about smoking cessation support/make referral and provide 7 day supply of NRT for patients who wish to quit

Take any opportunity to offer a brief intervention
## Appendix 2: Smoking Cessation Clinical Pathway

To be used for patients admitted or transferred to hospital and identified as a smoker in the Patient Admission Assessment Document. Use in combination with “NHS Grampian Guidance for the Inpatient Prescribing and Administration of Nicotine Replacement Therapy (NRT) for Nicotine withdrawal Symptoms in the Acute Setting”

**Smoking Cessation Clinical Pathway**

<table>
<thead>
<tr>
<th>CHI:</th>
<th>Name:</th>
<th>Address:</th>
<th>DOB:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Date

<table>
<thead>
<tr>
<th>………/……/………………</th>
<th>Initial</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Ask

1. When was your last cigarette? Date: ………/……/………
2. Are you currently using Nicotine Replacement Therapy (NRT)? Yes/No
3. Do you intend to go off site to smoke whilst an inpatient? Yes/No
4. Do you wish to use NRT whilst in hospital?
   - To help you quit
   - to assist with nicotine cravings

### Assess

If wishing to use NRT then determine Fagerstorm score

1. How many cigarettes do you smoke?
   - Less than 10 (0)
   - 10-20 (1)
   - 21-30 (2)
   - 31+ (3)

2. How soon after waking do you smoke your first cigarette?
   - Over 60 mins (0)
   - 31-60 mins (1)
   - 5-30 mins (2)
   - within 5 mins

Total score = 

[1-2 low tobacco dependence; 3-4 moderate dependence; 5+ high dependence]

### Assist

Having determined nicotine dependence score proceed to assist with NRT options as seen overleaf

For complete range of treatment options refer to British National Formulary if stock items are unsuitable.

For administration usage refer to NHSG Guidance for Inpatient Prescribing

### On discharge
